SCDB.info - The European Speed Camera Database

More and more countries in Europe are equipping their roads with traffic monitoring systems.

At locations that are particularly subject to accidents, speed cameras are erected specifically to catch speed offenders, to call them to account, and thereby to teach them a lesson. This should also reduce the number of accidents.

We are of the opinion that there is also another way to reduce the number of accidents.

With the help of our database, we hope to achieve the following for our users:

- to warn them in good time about high accident areas
- that they check their speed and adjust it if necessary
- that they can fully focus their concentration on what is happening in the traffic

The goal of our project is not to promote "racing"!

Register now!

Register today! It's really very easy. All registered users have access to the largest and most up-to-date speed camera database and some free plug-ins (for instance [Google Earth](#)). There are more than 19.000 fixed safety cameras all across Europe for your Navi.

For only **EURO 9.95** (roughly £7), you have access to **all** our plug-ins for one year.

Speed camera plug-in for Speed Camera Advisor

Installation Guide

Note:
Adobe Acrobat Reader is required to read the installation guide. You can load [Acrobat Reader here](#) for free.

Note:
New Advisor Update Software: Please download the latest version to update your Speed Camera Advisor. You can load the [Advisor Update Software](#) for free.

Please click **PDF button** to read the installation guide. This guide is coming up soon also in **German** and **French**.

[Installation Guide](#)

Next time, you just need to login the website by your register account and password for database download. Don't need to register the website again.

Step III: Install Advisor USB driver

- I. Please link the SC-200 and PC via USB cable, the system will detect the new hardware “GPS receiver”

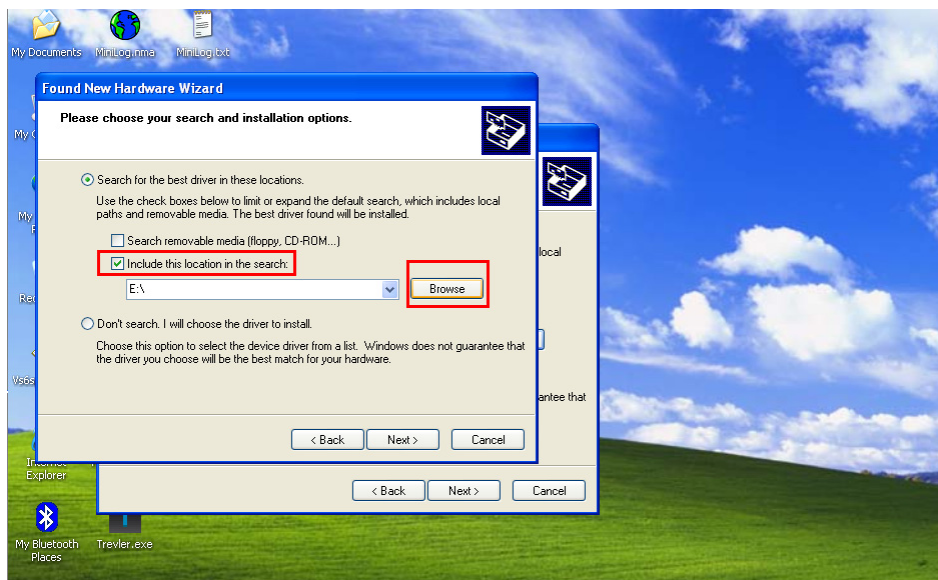

The system will request the “GPS USB Serial Interface Driver” and the hardware wizard message window will pop up.

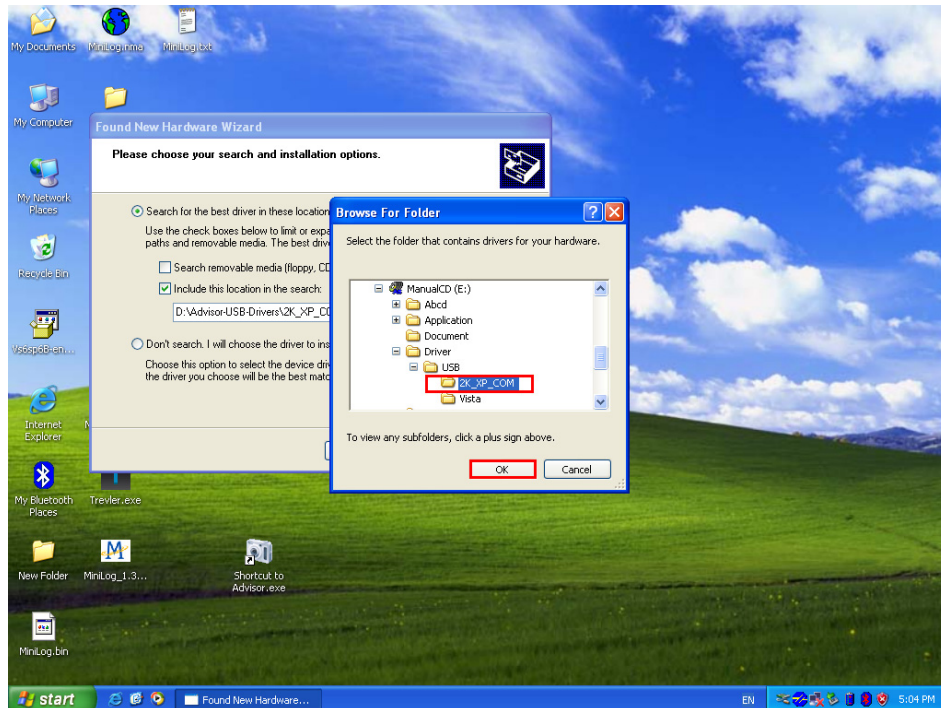

Please choose item 2: “Install from a list or specific location “.

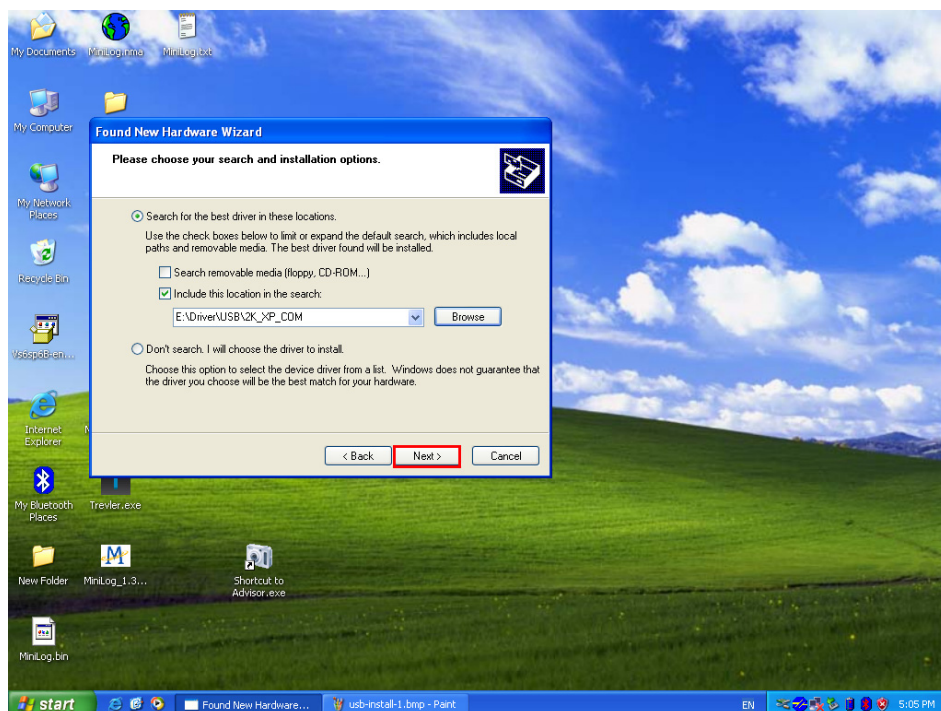

Please select the item “Include this location in the search” and browse the driver in your CD (or DVD) drive.

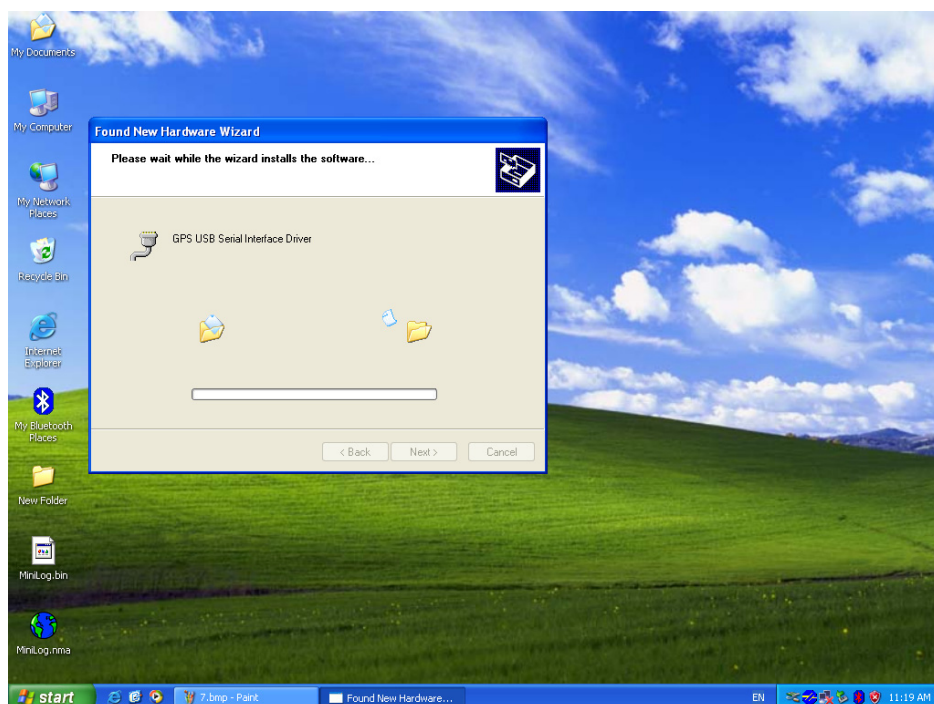

Please check your system O.S. and then choose the proper driver for your device. For example; WinXP O.S, then click “OK “.

And then press “Next “

The system will install the driver and request an agreement to do the installation, please choose “**Continue Anyway**”

The driver installation is finished.

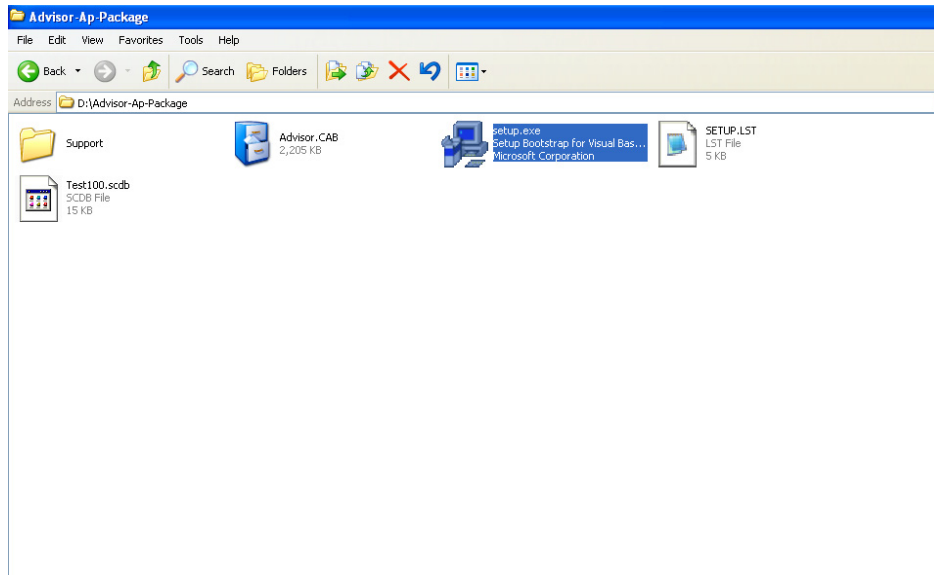

You can start to use the device

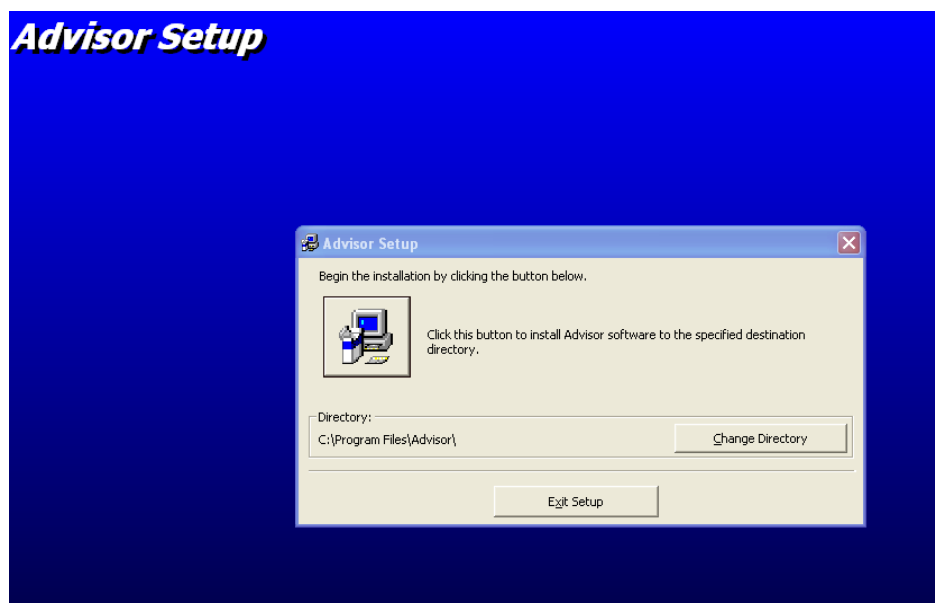

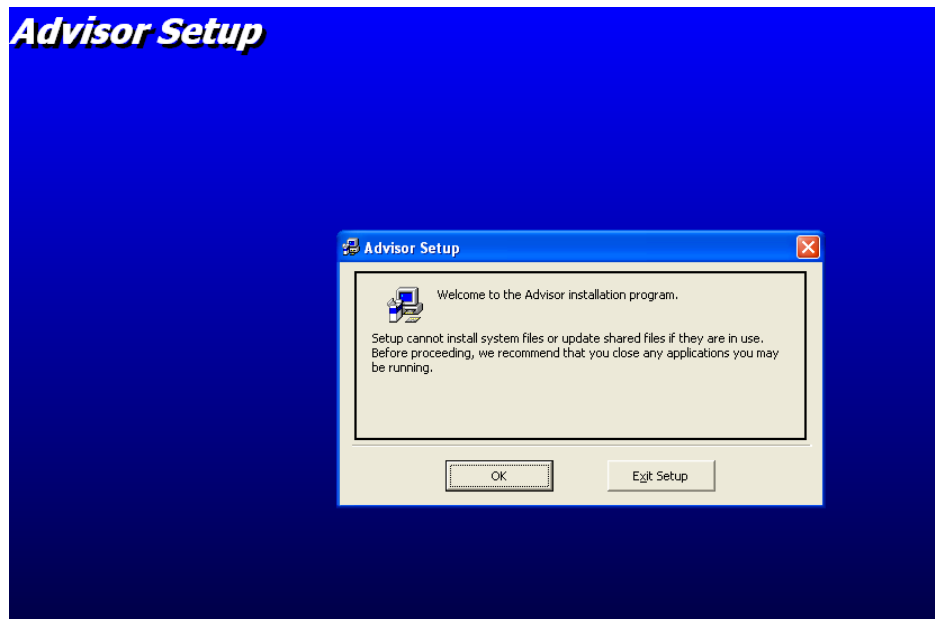

Step IV: Install the Advisor application tool in your PC

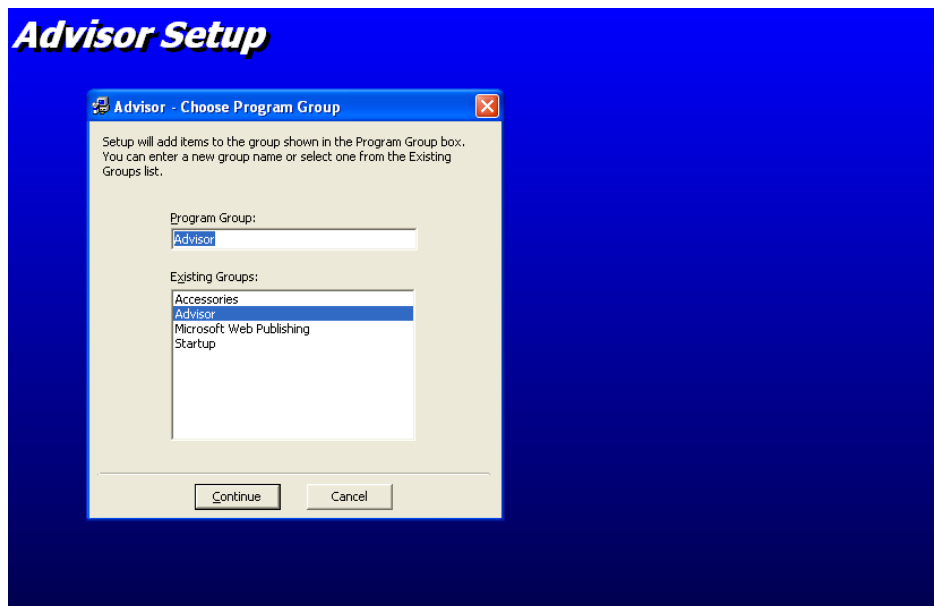

Please choose the setup.exe for Advisor application program installation.

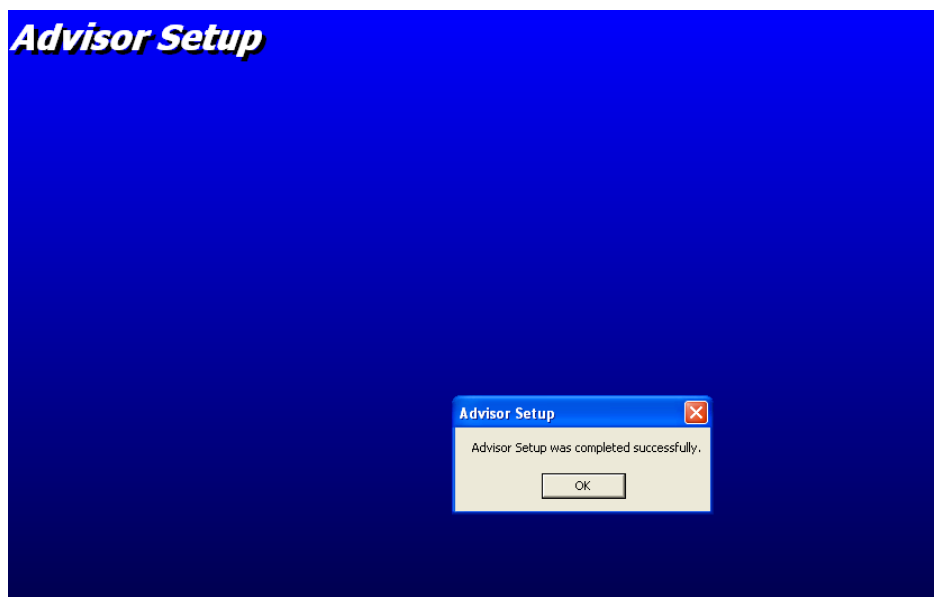

Press "OK "to install the program and follow steps to finish the installation.

Press “continue “button

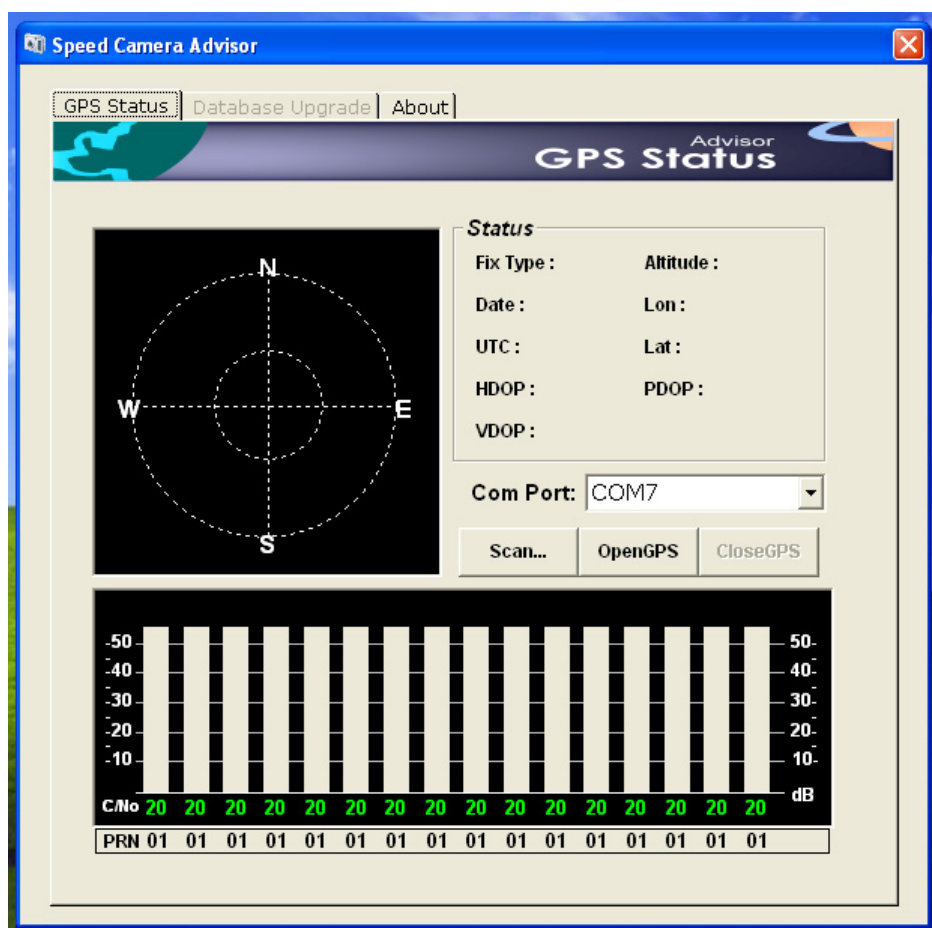

The installation is finished.

About the Advisor application program

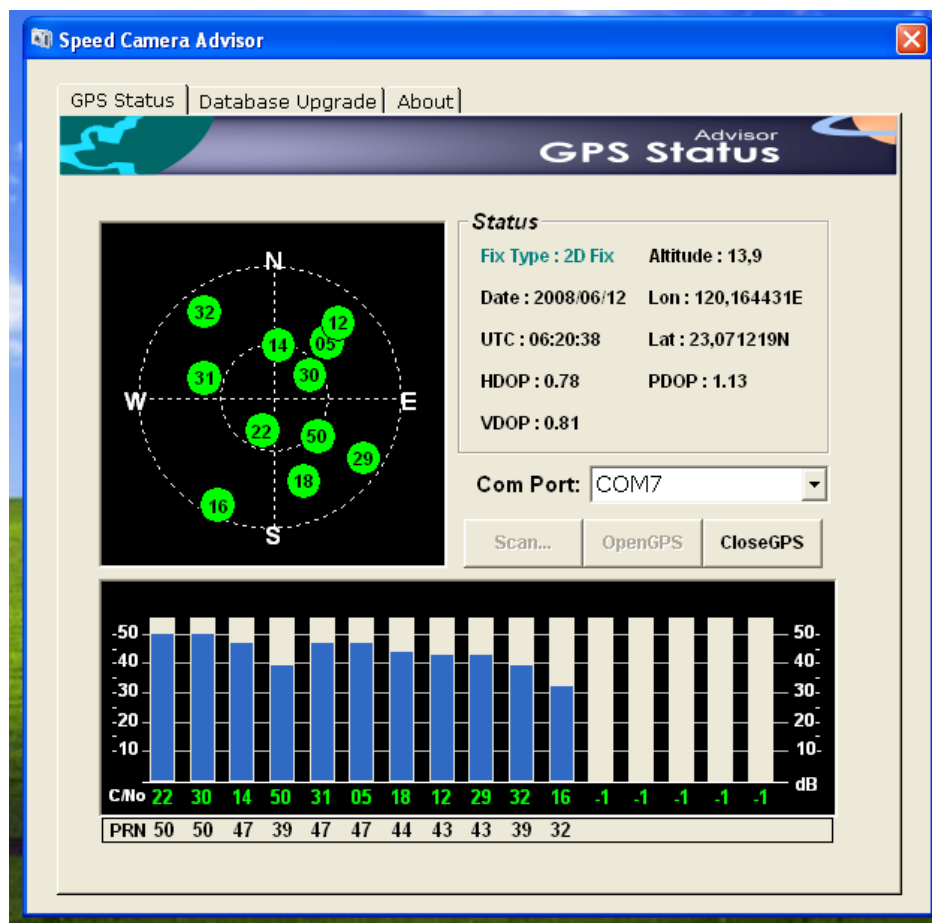

When you run the Advisor Ap., you can watch the outline of application program , it is divided three parts , and the related description about each page is described below :

1. GPS status
2. Database Upgrade
3. About

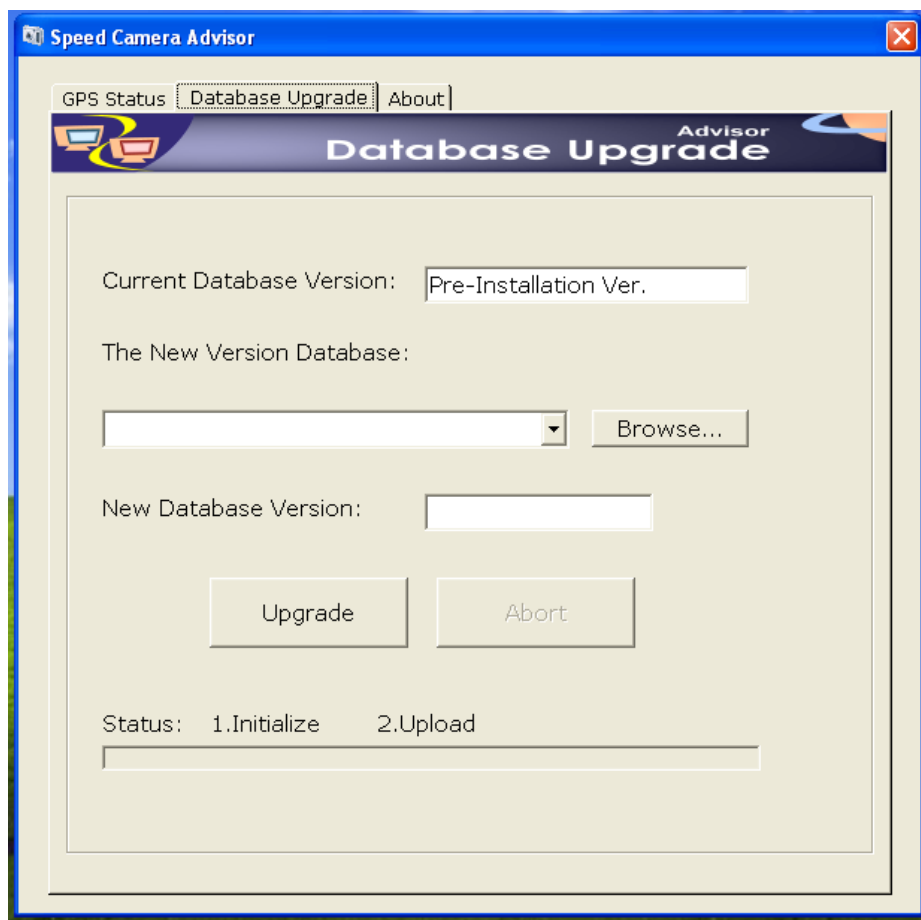

GPS status page:

The page supplies the PC link and GPS status function:

- Status:** (include satellites and C/N status chart)
It shows current GPS status and some information when you link and enable OpenGPS function.
- Com Port:** the current port for connection.
- Scan:** auto scan the port which is used by connection.
- OpenGPS :** open GPS function and database upgrade
- CloseGPS :** close GPS function

Database Upgrade page

Current Database Version:

The Ap. will check the current database version of the device when you want to update the database.

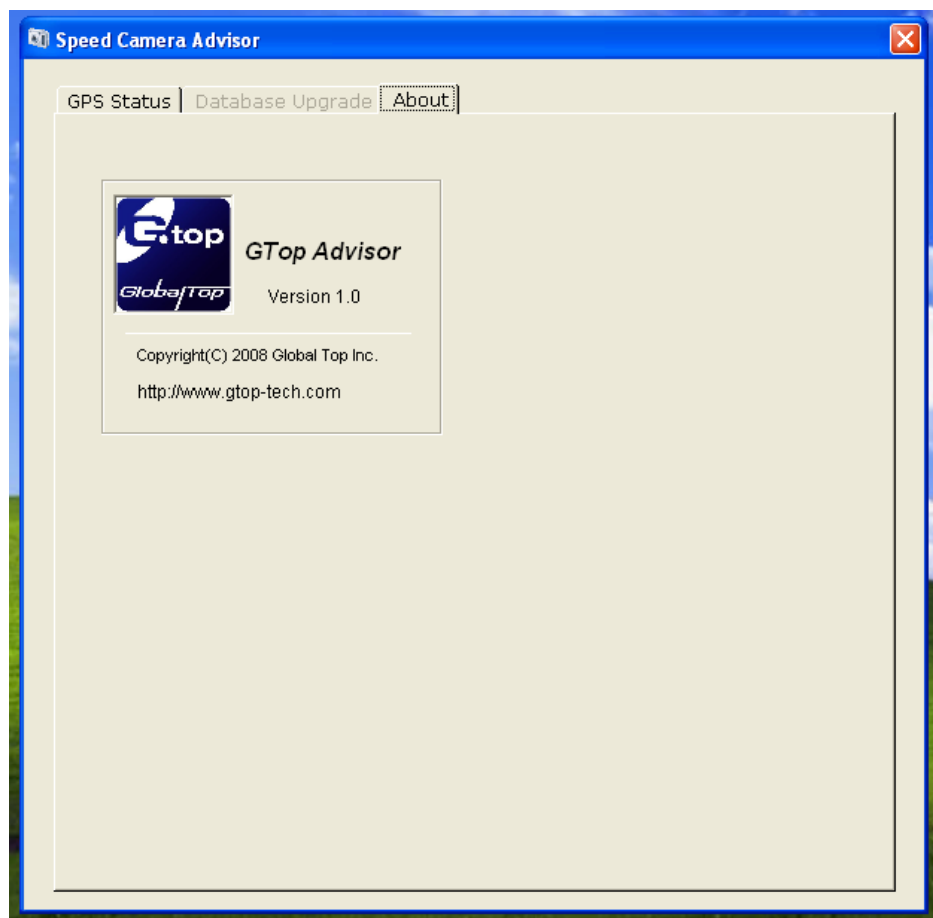

(Ps: the default version is Pre-Installation Ver.)

The New Version Database:

Please browse the target directory of your new database; it will get the database and version for upgrade. The progressing bar will show the upgrade status, and the leds of the device will be blinking by turns until the upgrade is finished.

About Page

The about page show company information and version.

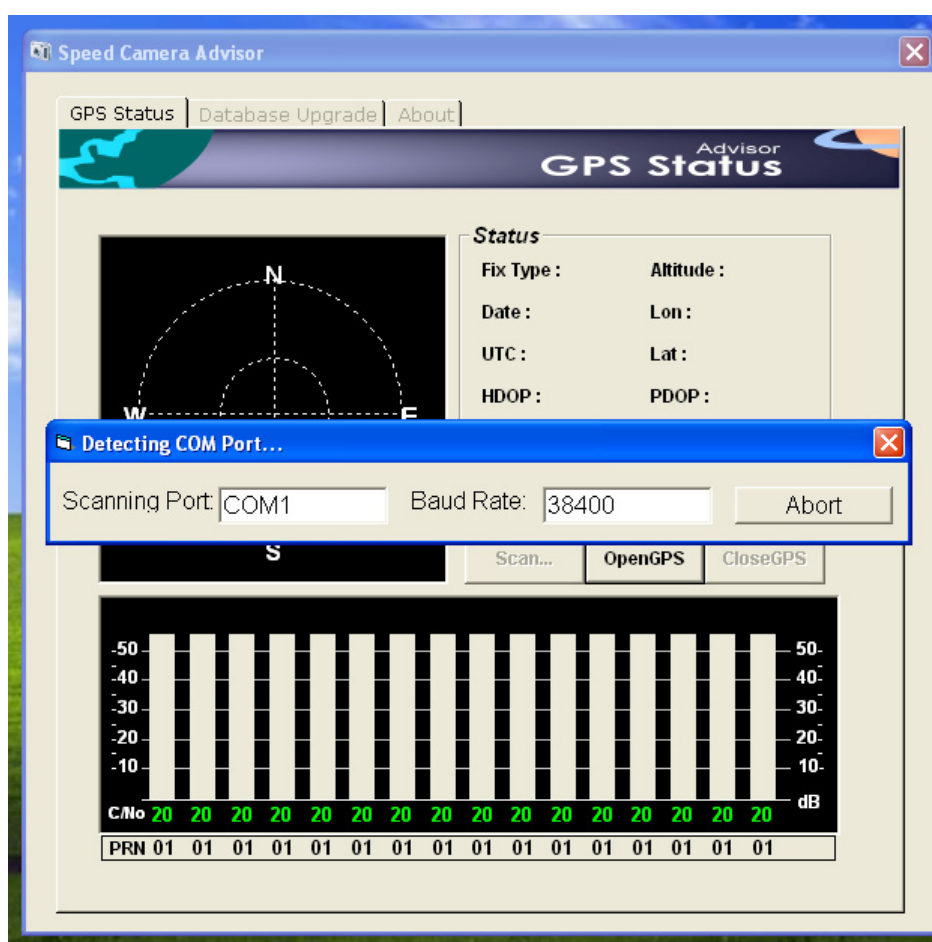

Step V: Upgrade your database of the SC-200 by application tool

About upgrade the database , the procedures are divided into four steps ,please follow related description to finish the database upgrade.

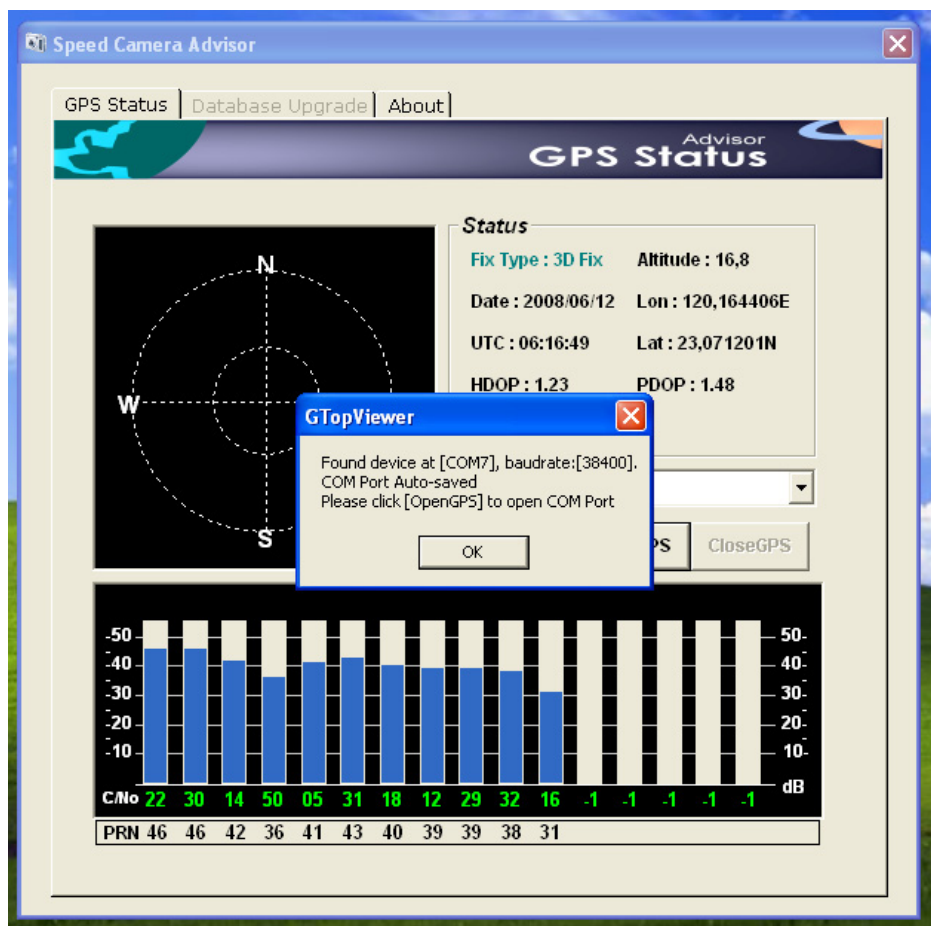

Step I: Connection via USB cable by auto scan

Please connect your device after install the Advisor USB driver (please install the USB driver when you will link device to PC at first time.) and execute the application program, then press “Scan “button to scan the com port was used by device.

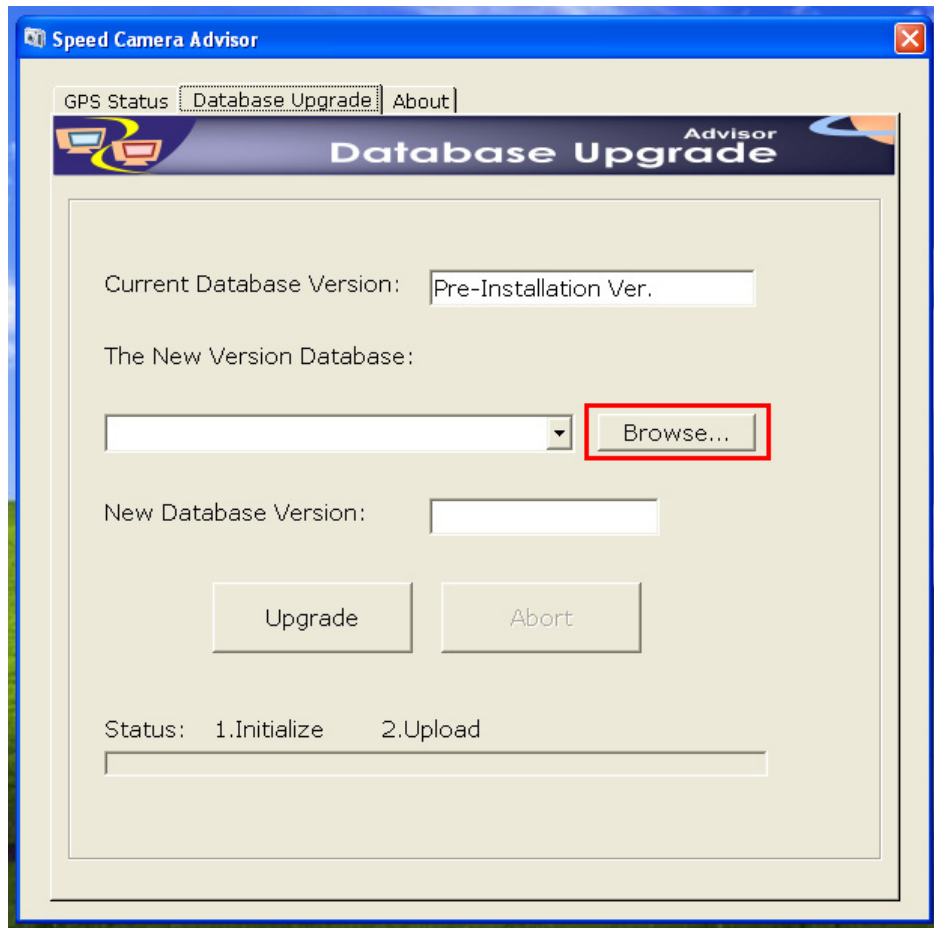

The message window will show “Found the device at [COMX] “; request to click [OpenGPS] to enable the COM port.

Notice: it is not necessary to receive the GPS signal when you upgrade the database.

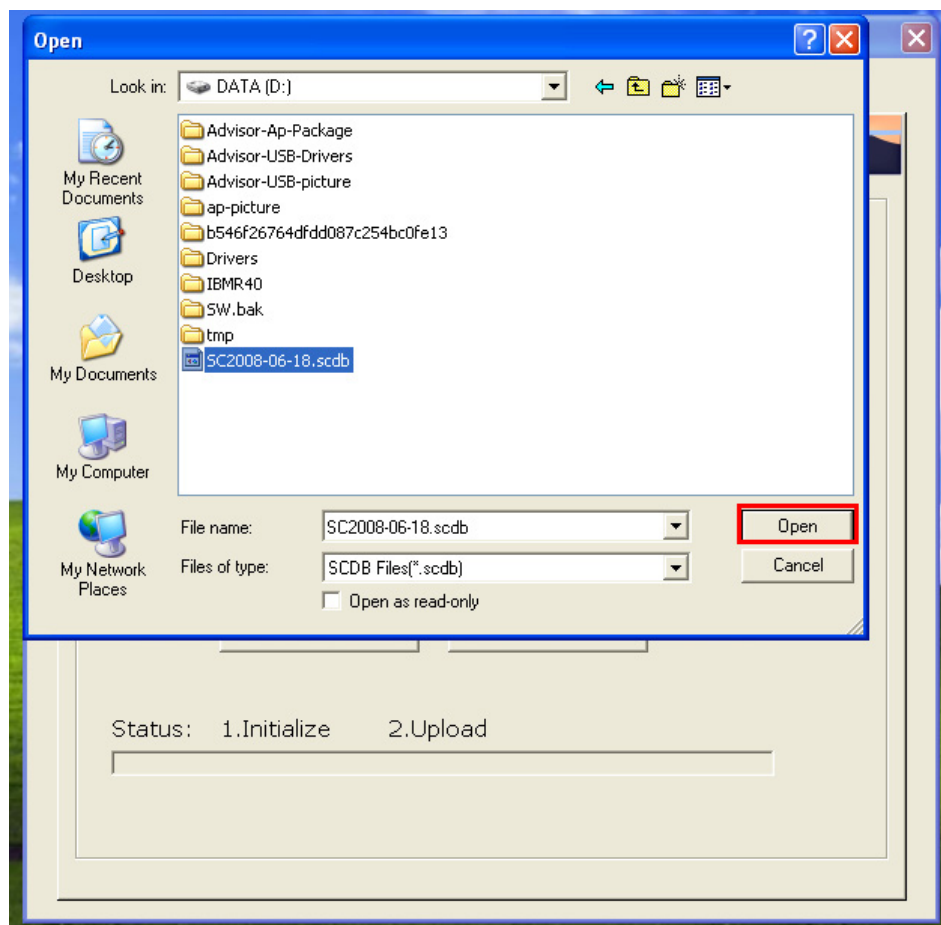

Step II: Upgrade the database

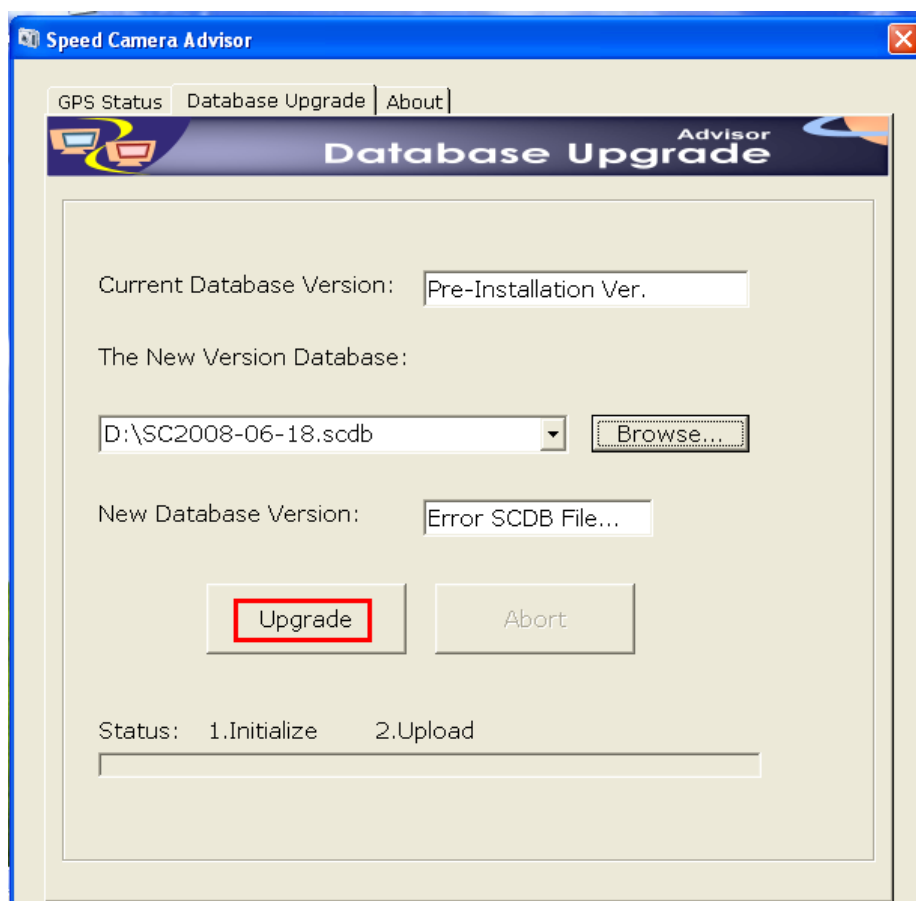

After Enable the OpenGPS, the database upgrade will can be accessed, you will find the current database version.

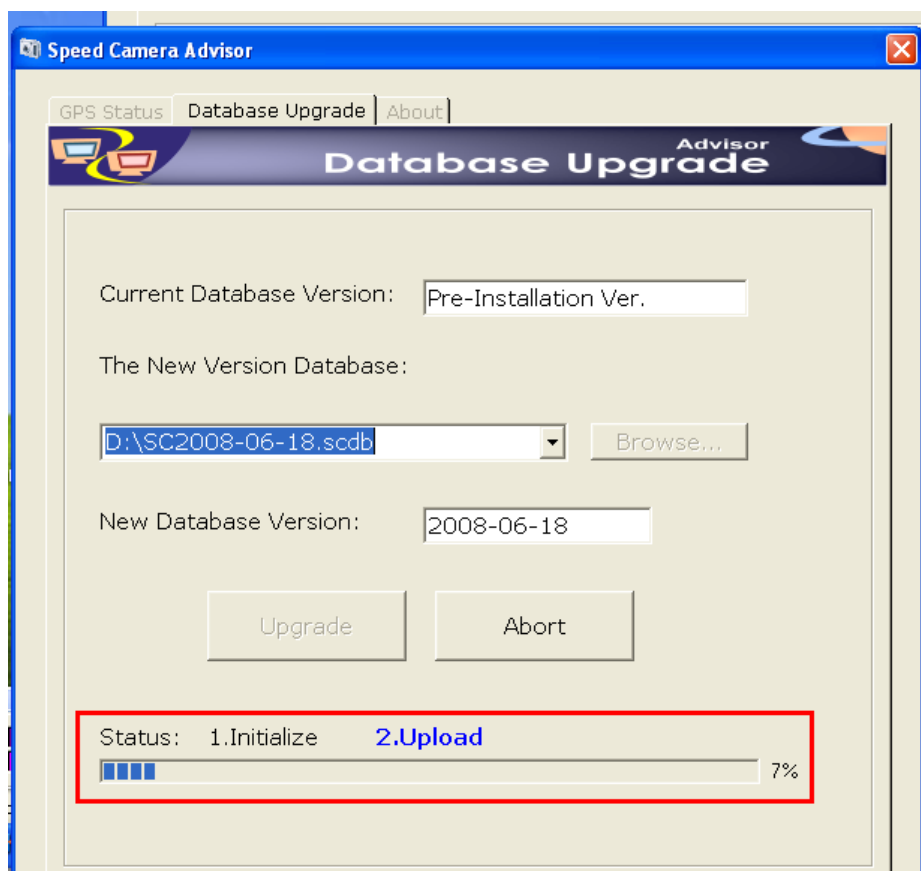

Please click the “**Browse ...**” to the target directory which saved the new database.
And choose the database you want to upgrade

Please click the “**Upgrade**” button to start upgrade, the progressing bar will show the upgrade status, and the leds of the device will be blinking by turns until the upgrade is finished.

Under upgrading

It would take couple minutes to complete this update entirely. Don't take this as error case.

If the upgrade process is terminated by something wrong or system unstable, please **upgrade again** when you solve the unstable problem. Please refer to the detail in troubleshooting item.

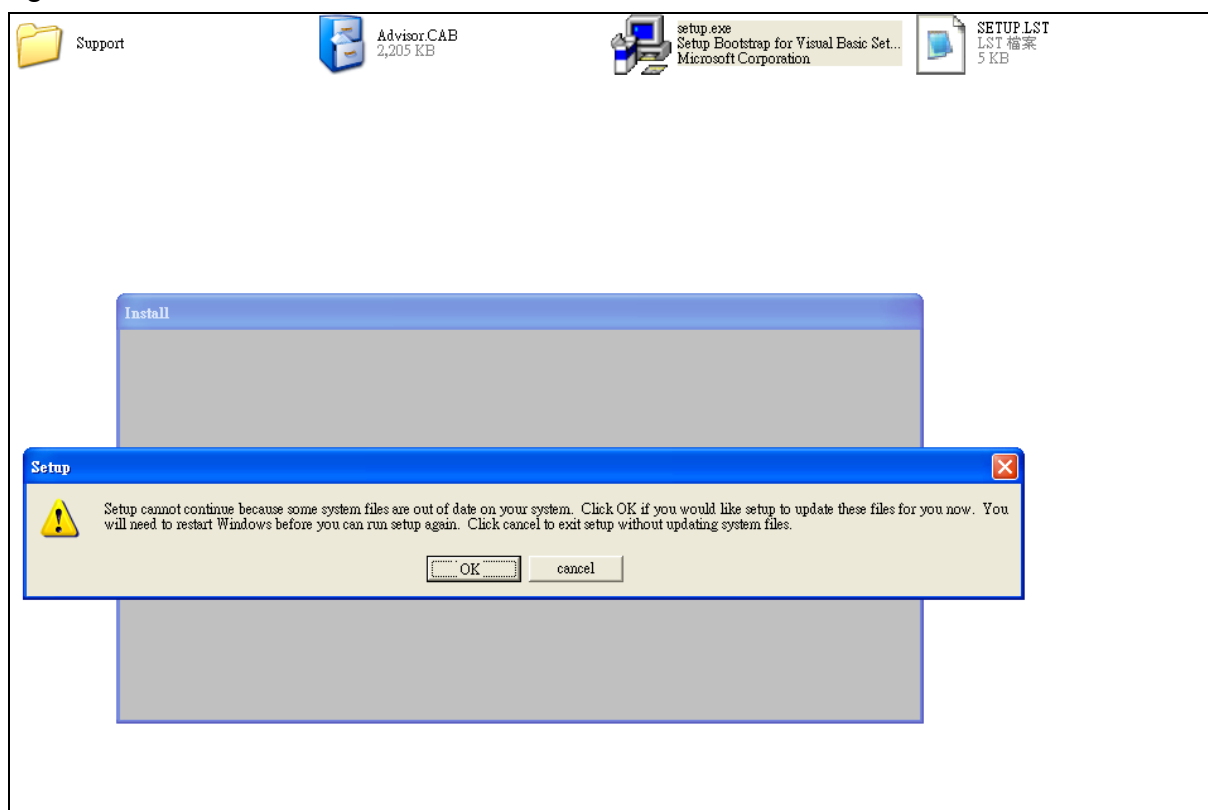

The database upgrade is finished .

Troubleshooting

Q1: Why the system requests to restart the computer during install the application program? (Please refer to the message window)

Ans: Because the application needs to use some new components, you need to update the patch for the application installation, please restart the program and install again.

Q2: What do I need to do if the system something wrong or upgrade abortion cause the upgrade fail during the upgrade is processing ?

Ans: please check your database file is good (we recommended that you download the database file again), and do the upgrade database process again.
